## APPLICATIONS

- Underground garages
- Multi-family houses
- Office Buildings

# PEGASOS CAR LIFT

## CHARACTERISTICS

- The PEGASOS was developed specifically for the transport of cars and convinces with a sophisticated design and a variety of comfortable features. Lifting and lowering is realised by an energy-efficient electric drive.
- The car lift is a system of two opposing guide columns and a chain driven framework at which the cabin is fixed.
- It is driven by two frequency controlled gear motors, which ensures a smooth acceleration and deceleration of the cabin.

## OPERATION MODES

### AUTOMATED RIDE

Self-retaining push button  
(from 3 stops)

### FULLY AUTOMATED RIDE

Automated ride due to car  
detection (2 stops)
